

DATA SHEET:

BREACHRECON

BreachRecon alerts clients when employee emails, usernames and personally identifiable information are exposed in third party data breaches. Early warning empowers clients to secure their systems and get ahead of cyber attacks.

KNOWLEDGE IS POWER

The first step in getting ahead of these threats and risks is knowing what your attackers know, and that means having the same data they have. By obtaining the same historical and ongoing breached information, organizations can quickly secure known compromised accounts and counsel affected employees. Strategically, this rich data set can be integrated and operationalized into an organization's cyber security and threat intelligence functions in order to anticipate, detect and prevent sophisticated attacks.

The best time to stop an attack is before it happens.

BREACHES ARE THE NEW NORMAL

Employees often inadvertently expose their organizations by using their work email and password when creating accounts on non-work websites such as LinkedIn and Netflix. When those websites are hacked, their user databases are sold and shared amongst cyber criminals on the internet. Today's reality is that billions of accounts are compromised each year. This provides adversaries a multitude of attack capabilities that put organizations at risk.

PASSWORDS ARE JUST THE FIRST PROBLEM

Certainly the clearest threat is direct access to an organization's systems by leveraging stolen credentials. But there is significantly more risk involved than meets the eye. The personally identifiable information and associated technical metadata contained in these breaches, combined with tools and other attack resources, gives hackers an unwelcome advantage. The realized threats span everything from direct and indirect access, account takeover, targeted profiling, spear phishing, fraud, impersonation to insider compromise.

BREACHRECON IS THE HIGHEST FIDELITY DATABASE OF USER ACCOUNT BREACHES AND CONTAINS OVER 10 BILLION RECORDS

BreachRecon is a cyber reconnaissance service from GroupSense that delivers historical and ongoing visibility to clients of all their employees affected by user account breaches. The service includes all available data, such as emails, usernames, passwords, technical metadata, and personally identifiable information. BreachRecon also features an API that clients may use to integrate and operationalize the data.

BREACHRECON

BENEFITS

Monitor for all Employees

Simply register all your organization's email domains and BreachRecon will automatically begin searching and monitoring for all your employees.

See it all

Unlike other resources, with BreachRecon, you'll see all the available data from breaches, including passwords, usernames, personally identifiable information, technical metadata and more.

Secure exposed accounts and stay vigilant

Quickly identify at-risk user accounts reset them and remain on alert for newly exposed credentials as they are exposed.

Improve security with more intelligence

Integrate and operationalize BreachRecon data to get more out of your existing security technologies and arm your threat intelligence operatives.

ABOUT GROUPESENSE

Actions are louder than words, We are changing how cyber intelligence is delivered and put into action.

GroupSense is a leading provider of cyber intelligence services. GroupSense is not a feed, or a search engine for the dark web. GroupSense are people, empowered by proprietary technology, helping information security and intel teams realize value.

We are trusted by governments worldwide to assist in cyber intel program development, election monitoring, and anti-fraud and risk measures. GroupSense tracks known and suspected threat actor and groups, publishing research. Our team reaches out to affected organizations regardless of customer status.

Read our recent report showing how compromised credentials are at the heart of the disinformation campaigns that interfered in the 2016 US Presidential election.
